Clarion Hotel® Arlanda Airport Terminal chose Uponor underground ventilation

Saving of buildable space
Clarion hotel Arlanda Airport Terminal is Scandinavia's closest meeting place. It is a first-class hotel in the middle of Arlanda Airport on 14 floors with 44 meeting rooms and 430 hotel rooms.

Fakten zum Projekt

Location	Fläche	Fertigstellung
Stockholm, Sweden	30 000 m²	2012
Gebäudetyp	Product systems	Anzahl der Stockwerke
Hotels & Gastronomie	Belüftung	14
Art des Projekts		
Neubau		

Underground ventilation installed outside the building save indoor space

The hotel's total area is 30,000 m^2. These areas include a building with two technology rooms that supply the hotel with preheated air via ventilation ducts in the ground - a cost-effective and smart choice compared to a traditional solution that takes up a lot of buildable space.

Uponor Infra delivered a designed system of pipes and fittings in dimension 1200 mm, completely according to the customer's needs.

Clarion Hotel® Arlanda Airport Terminal chose Uponor underground ventilation

Benefits of working with Uponor Infra

- Uponor Infra delivered a specially designed system completely according to the customer's needs
- Large savings of space

- Underground ventilation meant that the pipes did not have to be transported inside the building.
- Specially designed products
