Hot tap water delivered energy efficiently

Combi Port heat exchanger units were selected for seven apartment buildings made of logs in Oulu. The decentralized system is a new, energy-efficient approach to distributing hot tap water and heat to homes. The solution was implemented in seven detached houses that have just been completed in Oulu: only heating water and hot tap water are supplied to the houses. The rest is handled by each house's own heat exchanger. The result is living comfort and a significant reduction in heat loss.

Dati del progetto:

Location	Anno di completamento
Oulu, Finland	2020
Tipologia di edifico	Product systems
Casa singola	Sistema Port
Tipologia progetto	
Nuovo edificio
