Cythia House

Uponor'un projedeki rolü

0

Cythia House

Popping up all over the country in the 60s the somewhat practical 'boxes' of the social housing market are iconic fixtures on the British landscape.

Proje Bilgileri:

Lokasyon

Poole, Dorset, United Kingdom

Tamamlanma durumu

2008

Bina Tipi

Tek aileli konut

Ürün sistemleri

Radyant Isıtma & Soğutma, PEX Boru

Sistemleri

Proje Tipi

Renovasyon

Now with most

coming up to their 50th year, parts of the building's fabrication are in need

replacing. The pipework in particular,

installed in galvanised steel is now reaching its service life. One such project is Cynthia House in Poole, Dorset where the steel pipework is undergoing a complete

overhaul. The steel will be replaced by a

plastic alternative; Uponor's Multi Layer Composite pipe (MLCP), a plastic pipe

with an aluminium layer. Renovation

projects such as this one are taking place more regularly, and as the price for

metal products continue to rise.

The renovation carried Preheat of (Poole) involved the complete replacement of all the galvanised steel service pipework, installed from day one on the project. Painted galvanised steel only has a service life of 40 or so years; corroding from the inside out, causing leaks, reducing water pressure and some cases bursting. As with many social housing refurbishments the work needed to take place with the occupants still residing within the building so minimal disruptions was needed. Too heavy to bring down Pre-heat had to saw the pipe into shorter, more manageable lengths to get material off site.

The Uponor MLCP that replaced the steel was delivered on site in lightweight straight lengths of either 3m or 5m. Uponor's MLC pipe is recognised for being a market leader in the flexible plumbing market. The pipe possess a 100% oxygen tight construction (which prolongs the life of your pumps and other equipment sensitive to corrosion), limited expansion and smooth internal bore (allows the pipe to be used in hot and cold water, as well as heating applications without deterioration in the pipe's size or shape). Lastly the professional 'press-fit' jointing system is reliable and free of hot works.
